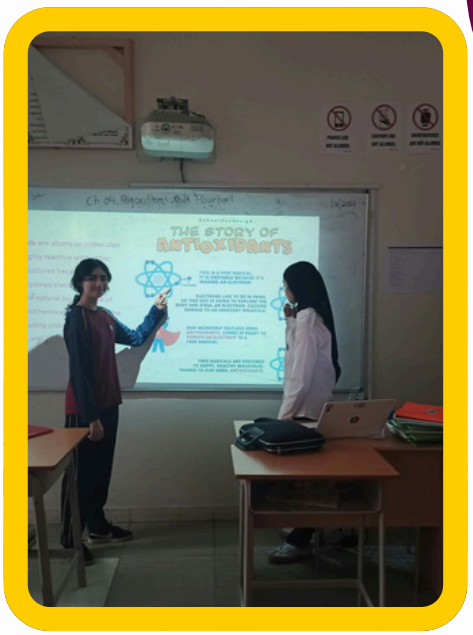
Week 9

What We Learned

Fighting Free Radicals, Fueling a Healthy Heart! ❤️
Our Grade 11 Biology students stepped into the role of health advocates, exploring the science behind free radicals and antioxidants. Through role-play, they discovered how antioxidants protect our cells and why including antioxidant-rich foods in our daily diet can help reduce the risk of cardiovascular diseases (CVDs).



Grade 11 Students Engage in Interactive and Collaborative Learning

Grade 11 students participated in an interactive Arabic learning activity that combined creativity, teamwork, and digital research. Working in groups, students used textbooks, tablets, and colorful materials to create informative posters and organize key ideas.
The activity included literary and biographical projects, such as the Taha Hussein Project, which were displayed on the Arabic subject bulletin board. Students collaborated in researching, writing, and presenting their findings, while encouraging peer learning and sharing knowledge.
This engaging experience enhanced students' creativity, communication, teamwork, and research skills, demonstrating the value of combining traditional classroom activities with digital learning tools.

Topic: Market Failure

Grade 11 Economics students participated in a creative poster-making activity on Market Failure. Students explored the meaning, causes and effects of market failure, including externalities, public goods, monopoly power and information failure. Through colourful and informative posters, students demonstrated their understanding of economic concepts and their impact on society.
